Summary

React Front-End Developer with strong experience in building scalable and responsive Web Application. Proficient in JavaScript, TypeScript, React Hooks, Context API, and component-based architecture. Experienced in managing application state, optimizing performance, and structuring clean maintainable code. Seeking to leverage my skills in challenging frontend roles. Experienced in both individual and team-based development environments.

Education

Ahram Canadian University – ACU | Cairo, 6th October *October 2019 - June 2023*

- Bachelor of Computer Science & Information Technology.
- **Major:** Artificial Intelligence.
- **Grade (GPA - 4):** 3.76 (Ranked 5th in the class).
- **Degree Graduation Project:** Excellent (A).

Skills

Technical Skills: HTML5 | CSS3 | JavaScript (ES6+) | TypeScript | Responsive Design | Accessibility | Fetch API | Local Storage | Performance | Optimization | Bootstrap | Tailwind | React Js | React Hooks | Context API | State Management | Clean Code.

Soft Skills: Communication | Teamwork | Learning | Time management | Leadership | Research | Creativity.

Projects

Nail Diseases Detection Using Deep Learning (Graduation Project) — [\(Demo Live\)](#)

- Built an AI-based diagnostic system for detecting **9 nail diseases** using a dataset of **12,700 images**.
- Improved accuracy across multiple architectures: CNN (74%) → VGG-19 (82%) → ResNet-50 (89%).
- Designed a user-facing interface that allows patients and medical professionals to upload nail images and receive real-time diagnosis with recommended specialist types.
- Provides a scalable AI-powered solution to enhance diagnostic accuracy and support clinical decision-making.

To Do List (React Js) Application — [\(Demo Live\)](#)

- Developed a TO-DO List app using React, TypeScript, and Vite with a fully Arabic UI supporting task creation, deletion, prioritization, filtering, and real-time updates.
- Designed scalable architecture using Context API for state management and separated Local Storage logic following modern best practices.
- Implemented advanced filtering by status and priority with strong TypeScript typing, optimizing performance using useMemo and reducing prop drilling.
- Enhanced user experience with priority-based UI customization, full documentation, and persistent data across sessions.

Travel Advisor Application — [\(Demo Live\)](#)

- Built a responsive travel advisor web application to explore restaurants, hotels, and attractions using interactive maps and real API data.
- Developed advanced filtering and search functionality with synchronized interactions between map markers and place cards.
- Integrated OpenStreetMap with React Leaflet and created custom markers, popups, loading states, and error handling for enhanced UX.
- Applied scalable React architecture using reusable components, Hooks (useState, useEffect, useMemo), and Tailwind CSS design system.

Certification

- **The Web Front-End Learning Guide** — Udemy
- **Database Fundamentals** — Mahara Tech
