Summary

React & Next.js Frontend Developer with hands-on experience building scalable, responsive web applications using TypeScript, Hooks and component-based architecture. Skilled in managing application state, optimizing performance, and structuring clean, maintainable code. Brings a distinctive edge from a Machine Learning and NLP background, enabling integration of AI-driven features into modern frontend systems. Comfortable in both independent and team-based development environments.

Experiences

Frontend AI Trainer | Outlier (Remote) | *Nov 2025 – Present*

- Reviewed and evaluated AI-generated frontend code HTML5, CSS3, Javascript, Typescript, React, and Tailwind CSS for technical accuracy, logical consistency, and code quality.
- Developed clear rating criteria to assess how well large language models (LLMs) handle complex frontend programming tasks.
- Provided detailed technical feedback and training data to help AI models better understand code structure, debug errors, and follow modern web development best practices.

Skills

Technical Skills:

- **Frontend:** HTML5, CSS3, Javascript ES6+, Typescript, React.js, Next.js, Hooks, State Management, Responsive Design, Accessibility, Performance Optimization.
- **Styling:** Bootstrap, Tailwind CSS.
- **Tools:** Git, GitHub, Vite, VS Code.

Soft Skills: Communication | Teamwork | Learning | Time management | Leadership | Research | Creativity.

Projects

Nail Diseases Detection Using Image Processing And Deep Learning (Graduation Project) — ([GitHub Link](#))

- Delivered a scalable AI-to-frontend pipeline that bridges deep learning inference with a user-friendly clinical interface – allowing patients and clinicians to upload nail images and receive real-time AI powered diagnoses with recommended specialist types.
- Built an AI-based diagnostic system detecting **9** nail diseases trained on **+12,700** labeled images, achieving a final accuracy of **89%** with **ResNet-50** — an improvement from **74% (CNN)** → **82% (VGG-19)** → **89% (ResNet-50)** across **three** architectures.
- Applied transfer learning and architecture comparison methodology, and documented results in an academic report graded **Excellent (A)**.

Travel Advisor Application — ([Live Demo](#))

- Built a fully responsive travel advisor app integrating real API data to explore restaurants, hotels, and attractions with live map interactions.
- Integrated OpenStreetMap via React Leaflet implemented custom markers, popups, loading states, and error handling for a polished UX.
- Developed advanced filtering and search with synchronized map-to-card interactions applied useMemo for optimized re-renders.
- Structured with reusable components and Tailwind CSS design system, following scalable React architecture patterns.

To-Do List Website Application — v1.0 → v2.0 → v3.0 ([Live Demo](#))

- Iteratively evolved a To-Do app from **v1.0** to **v3.0** eliminating **100% of prop drilling** via context API migration and improving render performance through **useMemo** optimization.
- Built with React, Typescript and Vite featuring a fully Arabic UI with task creation, deletion, priority levels, status filtering, and real-time updates.
- Separated Local Storage logic into dedicated modules following modern architecture best practices, and ensured data persistence across sessions.
- Applied string Typescript typing throughout, enabling robust type safety and reducing runtime errors.

Education

Ahram Canadian University – ACU | Giza — 6th October | *October 2019 — June 2023*

- Bachelor of Computer Science & Information Technology.
- **Major:** Artificial Intelligence.
- **Grade (GPA - 4):** 3.76 (Ranked 5th in the class).
- **Degree Graduation Project:** Excellent (A).

Leadership / Extracurricular

Graduation Project Team Leader Ahram Canadian University | *October 2022 — June 2023*

- Led a 5-member team across the full project lifecycle, from planning and task distribution to final delivery — completed on time with a grade of Excellent (A).
- Served as the primary point of contact between the team and the academic advisor, ensuring clear communication and alignment throughout all project phases.
- Coordinated workload distribution based on each member's strengths, keeping the team focused and productive under academic deadlines.

Certification

- **The Web Front-End Learning Guide — Udemy**
